Tools: MongoDB; Chrome Dev Tools; Vercel; Photoshop; Figma; Firebase Authentication; GitHub; Netlify;

Familiar Tools: TypeScript; Redux; Material UI;

PROJECTS

PROJECT NAME: LastBooks

[Live Website Link](#) || [Front-End Code](#) || [Back-End Code](#)

- A second handed books selling website for students. There is a Dashboard to manage Admin routes, Seller routes. In this website a successful payment method is added.
- I used React.js as a front-end technology and Tailwind CSS as a CSS framework. Used some React.js packages to faithfully finish the website. For back-end I used Express.js. Implemented JWT token for a strong verification.
- Used MongoDB as a database. And added two sign-in method Email and Google sign-in.

PROJECT NAME: FoodMart

[Live Website Link](#) || [Front-End Code](#) || [Back-End Code](#)

- An own garden's food selling website with a seller friendly option. A seller can add a product easily with a few information.
- I used React.js as a front-end technology and Tailwind CSS as a CSS framework. Used some React.js packages to faithfully finish the website. For back-end I used Express.js.
- Used MongoDB as a database. And added two sign-in method Email and Google sign-in.

PROJECT NAME: DevLearn

[Live Website Link](#) || [Front-End Code](#) || [Back-End Code](#)

- Learning website including some courses where a user can get a course with a few costs. Especially focused on UI design.
- I used React.js as a front-end technology and Bootstrap as a CSS framework and little plain CSS. Used some React.js packages to faithfully finish the website. For back-end I used Express.js.

Used MongoDB as a database. And added three Login methods from Firebase as Email, Google and GitHub Login.
